Simple to use EPOS
for Hospitality

Maximise Profit • Simplicity • Peace of Mind • Save Time • Grow & Innovate • Stay Current

Register by Smart Volution is an innovative, cost-effective and modern EPOS solution combined with enterprise class support. Designed for simplicity, the Plus edition of Register provides enhanced functionality to the hospitality market. Register provides operational efficiency to maximise “covers”, make reservations and reduce no shows. It allows small to medium-sized hospitality businesses to harness enterprise efficiencies at an affordable price point.

Modern Electronic Point of Sale (EPOS) is not just about executing payment, managing inventory and keeping records. It's about business management and providing a point of customer service.

1

John phones the restaurant to make a table booking. They look up his favourite table on the CRM and book him in on the Register Calendar. John receives a confirmation text. Two hours before the booking John receives another text reminder of his booking.

2

John arrives at the restaurant and goes to the bar. He orders a drink and a bar tab is opened for him on Register. One Pint of beer is deducted from the stock level of the barrel.

3

John's friend Jim arrives and they go to the table. John's bar tab is moved to "Table 6".

4

John and Jim order their food at the table. The food order is printed on a kitchen printer (via the Register) and prepared by the chef.

5

They finish their meal and ask to pay. The bill is £50, but John had more than Jim. John pays £30 and Jim pays £20 using split payment on Register.

Contact us to find out more about Register EPOS

Reservations - The Register appointments calendar allows you to centrally book tables. The reservations are then distributed to all EPOS terminals. Reservation types (e.g. Groupon meal, Birthday party) and duration can all be pre-set on the portal.

Text Reminders - Reducing no show customers can have a significant positive impact on your business. Text reminders are a proven way to remind customers of their booking, good for you and convenient for them. Message content, how many, and when they are sent is all configurable. You can even wish your customers a happy birthday.

Tab Management - Create, move, suspend and resume tabs. Tabs can have pre-set names such as tables or given names on the fly. Transactions can be suspended for takeaway. Move tabs from the bar to table 1. Tabs can be accessed on all EPOS devices or kept locally on a specific device.

Kitchen Printer - As soon as the customer has placed an order it can be printed in the kitchen and food preparation started. Products can be configured to go to the kitchen printer or not. In addition, you can record product comments no cheese, extra mayo or medium rare. These comments are output on the Kitchen printer.

Hospitality Browser - is an item/product browser specifically designed for hospitality. Its large and scrollable interface allows you to view many items at once. With a configurable category layout, you can match your menu, food might be categorized as Appetisers, Mains and Deserts, Drinks as draft, bottles, liquor and mixers. This enables you to service the customer quickly.

Customer Relationship Management (CRM) - Utilizing our CRM module, you can record contact information to manage customer table bookings and link them to a transaction. You can also record more detailed information such as favourite table, allergies or their birthday. With this information, you can provide a more honed service.

Delivery Address - The customer's name and address can be automatically printed on the receipt for easy communication with the delivery driver.

Feature Rich EPOS - Simple to use, fast and efficient EPOS functions. Register is feature rich with over 160 configurable elements including all the standard EPOS functionality you would expect and more.

Unlimited Users - With register there is no limit to how many users you have on the system. They can be associated to one store, a selection of stores or all stores.

Web Portal - Centrally manage, configure and report on your entire retail estate. Easily add, view and modify all aspects of your business such as products, departments, stores, clerks, tax, discounts, pricing, inventory, quick pick products, hardware and dashboard. Report on and control

Time Keeping & Clocking in - Use our clocking in/out functionality to monitor all staff time keeping. Register EPOS clerks and any other staff members clock in and out on the Register. Clerks can clock in and log into Register at once. A timekeeping report can be viewed on the web portal.

Inventory Management - Quite simply, Register automates tasks and gives you back time. Stock information can be imported automatically from your distributors data and sent to all Registers at the click of a button. Automatic stock management means you require less physical inventory checks. Automated low stock and replenishment reports, all save time and money.

Enterprise Class support - You want a solution that just works and if there is a problem you need assistance quickly. If you are an experienced business with an old PC based system you will have probably felt the pain of poor support. Register is backed by a multi-level support team delivering "Enterprise Class Support".

Multiple Sites - If you have one or multiple restaurants, Register has you covered. You can centrally manage, configure and report on all sites via the web portal. You can simply make a price change on the web portal or change a supervisor approval setting and distribute it to all Register at once. All store and Register sales information is sent up to the central Web portal. Scale and grow with Register.

Operates off line - You may be a smaller business but our systems run in the same type of operating environment that tier one merchants use. The Register EPOS software uses a hybrid architecture of cloud and local data allowing it to work offline if your internet goes down.

Modifiers - Use configurable product modifiers to alter an order before it is printed. Add onions to a burger or have your stake medium-rare.

Supplier Management - Manage all your supplier details in one place. Run supplier reports and filter all applicable reports by the supplier.

Weighed and measured items - If you sell coffee by the lb, wine by the glass or beer by the pint Register has you covered with its configurable units of measure and stock container functionality.

Serve anywhere with a fixed and mobile EPOS. Register is an innovative feature rich EPOS with over 160 configurable elements. Book reservations and send text reminders, manage and move tabs, print orders direct to the kitchen and manage your stock. Market to and know your customers better with customer relationship management. Registers' central business view provides the ability to make the best use of your sites, staff and products in order to maximise profit and leverage peak times. Simple to use, Register has all the functionality of a traditional cash register with an overlay of modern EPOS functionality. This is something everyone has reference to and simplifies training. Register is backed by a multi-level support team delivering "Enterprise Class Support". You may be a smaller business but our systems run in the same type of operating environment that tier one retailers use. Register EPOS automates tasks and gives you back time and stays current, based on customer requests and market trends.
